

Cohort construction

Protocol v2.0. Upstream exclusions were applied before this export and cannot be itemised here.

IIH-coded patients supplied
after upstream exclusions (n = 3601)

Seizure at/within 180 d of index
(presenting, analysed separately): n = 71

No matchable control found: n = 869

IIH cases in matched cohort (n = 2732)

Matched non-IIH controls (n = 9742)
1:4 attempted; mean achieved 3.57

Analysed: 12474 patients, 126 incident seizures at 3 y

Shaded (tan) boxes are patients removed from the comparative analysis.
